

SAGAR KAR

Senior Machine Learning Engineer

📞 +91-7002086905 ✉ sagarkar10@gmail.com 🌐 sagarkar10.github.io

Summary

Senior Machine Learning Engineer with **8+** years designing, building, and operating **production ML and data systems end-to-end** — from distributed data pipelines and feature engineering through model serving, monitoring, and iteration. Track record building **ML platforms** across matching, ranking, and recommendation, driving technical decisions across ML architecture and production engineering, and mentoring engineers on modeling and MLOps practices. Comfortable owning ambiguous, full-stack ML problems in fast-paced, hands-on teams.

Experience

Senior Machine Learning Engineer

Dec 2021 – Present

Sense, Remote

- Built ML-powered **candidate matching and scoring systems** that cut recruiter effort by 60% while improving match relevance and scalability.
- Designed **candidate data ingestion, normalization, and transformation pipelines** handling 10M+ candidate profiles at scale.
- Developed **ML and LLM-based scoring frameworks** that improved candidate representation and reduced irrelevant matches.
- Scaled recruitment AI systems to **10M daily interactions**, driving a 35% improvement in matching accuracy.
- Established **production monitoring, alerting, and evaluation practices**, and mentored ML engineers while driving technical decisions across ML architecture and production engineering.

Machine Learning Engineer

Aug 2020 – Dec 2021

Unbxd, Bangalore, India

- Developed **Learning-to-Rank models** using LambdaRank and LambdaMART, improving search relevance by 28%.
- Built reusable **Spark and Kubeflow data pipelines** processing 1M+ product interactions/day for large-scale ML workflows.
- Designed and operationalized **ML serving infrastructure** supporting 99.9% uptime and sub-100ms latency.

Machine Learning Engineer

Apr 2019 – Aug 2020

Insider.in, Mumbai, India

- Developed dynamic pricing models using statistical forecasting and demand prediction, increasing revenue by **22%**.
- Built recommendation system for event-space inventory with highly volatile availability.

AI Engineer

Jun 2018 – Apr 2019

SigTuple, Bangalore, India

- Developed Deep CNN-based microscopic video analysis systems for particle detection and cell tracking, achieving **95% diagnostic accuracy**.
- Performed data exploration, analysis, visualization, and preprocessing on medical datasets to support ML model development

Skills

Languages: Python, Java, SQL, R, C++

ML / DL Frameworks: TensorFlow, PyTorch, Keras, Scikit-learn, NLTK, Huggingface, Transformers, LangChain

Infra & Platform: AWS, Kubernetes, Docker, Spark, Kubeflow, Databricks, OpenSearch, Solr, Kafka, Airflow, CI/CD, Grafana

Domains: Search & Ranking, Recommendation Systems, NLP, LLMs & RAG, Generative AI

Early Career

AI Intern

2017

NotionInk

- Optimized D-CNN models for low-end CPUs using Intel MKL / ARM Compute, achieving approximately **13% efficiency gain** over benchmark.

Data Science Intern

2016 – 2017

PriceBoard.in

- Contributed to the open-source AWS-ELK-BILLING project, which reached **100+ GitHub stars**.

Freelance

2016 – 2018

Independent Projects

- Worked on NLP-based resume classification (**Gamut Analytics**), crop-yield forecasting with ARIMA/ANN (**Cheruvu**), and audio transcript parsing (**Scribie**).

Education

B.Tech, Computer Science & Engineering

2014 – 2018

National Institute of Technology, Silchar

CGPA: 8.07
